

Wisdom AI FAQ

Point at a question and get the correct answer, with an explanation that helps you understand why it is correct.

Android: **Google Play** – search “Wisdom AI” · iOS: **App Store** – search “Wisdom AI”

How does it work?

Choose the AI model, choose “Multiple choice” or “Open question” and take a photo of the question: in a few seconds you get the answer with an explanation. You never write a command (prompt): the app is already set up to answer.

What is the API key I am asked for?

The API key is what lets the app communicate securely with the service of the AI model you choose. Each provider (OpenAI for ChatGPT, Google for Gemini, DeepSeek) has its own key, different from the others: a key used for one provider does not work for the others.

How do I get the API key?

In the app, tap the question mark in the box where the key goes: you will find a video tutorial of about two minutes. You can also find it at unidevelopers.it/wisdom/api-key.html.

Is the API key sensitive data?

Yes. In the app it is encrypted and stored locally, and it must not be shared with anyone. From the provider's website you can revoke it and create new ones at any time.

Which AI models are there?

ChatGPT theory and searching your PDFs. Currently: gpt-6-astra

DeepSeek exercises, maths, physics, statistics, engineering. Currently: deepseek-v4.1-flash

Gemini reasoning on the most complex problems. Currently: gemini-3.1-pro

The models update themselves, automatically and for good, to the latest version the provider releases: you don't have to do anything, and each model's job stays the same.

The golden rule: if you see numbers, choose DeepSeek; for theory, choose ChatGPT; for a very complex problem, choose Gemini.

Do I choose “Multiple choice” or “Open question”?

If your photo shows the possible answers as well as the question, choose “Multiple choice”. If only the question is visible, choose “Open question”. In both cases, make the choice before taking the photo.

Can I type instead of taking a photo?

Not at the moment.

How long does it take? Can I process several questions at once?

A few seconds. One question is processed at a time, to devote all the power to a single request.

What are "Crop images" and "Multiple images" in the settings for?

- **Crop images:** lets you crop the photo with a gesture before it is processed.
- **Multiple images:** lets you take several photos of the same question, useful when the question and its answers take up a lot of space on the screen or page.

What is the "Attach PDF" button for?

When you attach a PDF, the model's answers are based exclusively on the information in the document. If the information is not there, the model uses its own knowledge and, like any AI model, can make mistakes: that is why it is best to attach the PDF of your study material.

- You can upload as many PDFs as you like: they stay saved in the app, privately and encrypted, but only one can be consulted at a time. To use several together, merge them into one file (for example with iLovePDF).
- After uploading, make sure you have selected it: the "Attach PDF" label is replaced by the file name.
- The PDF must contain text: a PDF made only of images cannot be read.

Why do I have to load credit on the AI model provider's website?

Think of it as your "fuel": providers charge for every single request. It is a small cost per request, which varies from model to model. By loading a small amount (for example 5 or 10 euros) you can use the app for a long time, and you can also set up automatic top-up.

How much does Wisdom AI cost? Can I try it for free?

- Monthly: €9.99
- 6 months: €49.99 (1 month free)
- Yearly: €89.99 (3 months free)

There is always a 7-day free trial. If you need more time, contact support with the "Immediate support" button in the app: you may receive a bonus code to redeem in your store (Google Play or App Store).
